Louisville Metro Air Pollution Control District PM_{2.5} Monitoring Report February 2021

This report summarizes $PM_{2.5}$ data collected by Federal Reference Method (FRM) and Federal Equivalent Method (FEM) instruments. Measurements are reported as 24-hour averages in micro-grams per cubic meter ($\mu g/m^3$). The data are subject to further quality assurance checks and are not final.

PM_{2.5} Monthly Data Summary for January 2021

	Max	imum	Mir	nimum	Sample	Monthly
Site Name	Conc.	Date	Conc.	Date	Recovery	Average
Algonquin Parkway *	20.6	1/10/21	5.0	1/15/21	NA	10.5
Durrett Lane	24.0	1/10/21	5.9	1/15/21	NA	11.7
Cannons Lane	20.6	1/10/21	5.2	1/15/21	NA	10.7
Watson Lane	22.6	1/10/21	6.1	1/31/21	NA	10.6
Overall	24.0	1/10/21	5.0	1/15/21	NA	10.8

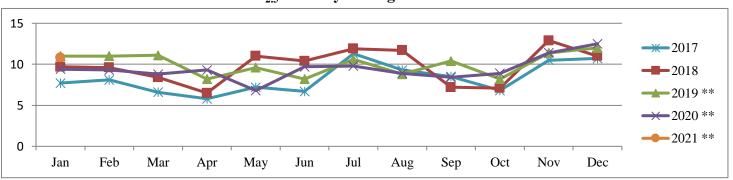

^{*} LMAPCD officially changed the Firearms Training site name to Algonquin Parkway

PM_{2.5} Monthly Averages Tracking Table for 2011-2021

^{*}The new PM_{2.5} standard of 12 µg/m³ became effective on March 18, 2013 ** Data from continuous FEM Instruments

PM_{2.5} Monthly Averages 5-Year Trend

National Ambient Air Quality Standards (NAAQS):

National Ambient Air Quality Standards consist of primary and secondary standards. The primary standards define levels of air quality which EPA judges are necessary, with an adequate margin of safety, to protect the public health. The secondary standards define levels of air quality which EPA judges necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant. For PM_{2.5} the levels of the primary and secondary standards are the same.

National Ambient Air Quality Standard for PM_{2.5} - Annual Standard:

The annual standard is designed to provide an appropriate level of protection from long-term exposure to $PM_{2.5}$. The standard is met when the annual design value is less than or equal to $12 \,\mu g/m^3$. The standard changed from $15 \,\mu g/m^3$ to $12 \,\mu g/m^3$ on March 18, 2013. The annual design value is calculated by averaging the annual means of 3 consecutive complete years of air quality data. The table below compares data collected from 2014 through year-to-date 2020 to the $PM_{2.5}$ annual standard.

PM_{2.5} Annual Means and Annual Design Values

		A	nnual	Means	s μg/m	3		Annual Design Values					
Site Name	2015	2016	2017	2018	2019	2020	2021	2015-2017	2016-2018	2017-2019	2018-2020	2019-2021	
Algonquin*	10.4	8.3	8.3	9.5	10.2	9.3	10.5	9.0	8.7	9.3	9.6	10.0

National Ambient Air Quality Standard for PM_{2.5} - 24-Hour (Daily) Standard:

The 24-hour standard is designed to provide an appropriate level of protection from short-term exposure to $PM_{2.5}$. The standard is met when the 24-hour design value is less than or equal to 35 μ g/m³. The design value is based on 3 consecutive complete years of air quality data and is calculated by taking the average of the 98th percentile value for each of the 3 years. The 98th percentile value is the 24-hour average out of a year of $PM_{2.5}$ monitoring data below which 98 percent of all 24-hour averages fall. The table below compares data collected from 2014 through year-to-date 2020 to the 24-hour standard for $PM_{2.5}$.

Louisville Metro Air Pollution Control District Air Monitoring Report for Sulfur Dioxide (SO₂) February 2021

On June 2, 2010, EPA strengthened the primary National Ambient Air Quality Standard for SO_2 . Specifically, EPA replaced the existing annual (30 ppb) and 24-hour (140 ppb) primary standards with a new 1-hour standard set at 75 ppb. The 1-hour standard was set to better protect public health by reducing exposure to high short-term concentrations of SO_2 . The new standard took effect August 23, 2010.

Exceedances of the 1-Hour SO₂ Standard:

An exceedance occurs when a measured 1-hour average is greater than 75 ppb. Since up to twenty-four 1-hour averages are recorded each day, multiple exceedances may occur in one day. However, only the maximum 1-hour average (Daily Max) for each day is used in determining if the area is in compliance with the standard. The table below indicates the number of exceedances and the daily maximums reported thus far this year. The data are subject to further quality assurance checks and are not final.

SO₂ Daily Maximums and Exceedances through January 31st

	Algonquin Parkway			on Lane entary		ns Lane Core	New Albany Indiana		
Date	Exceeds	Daily Max	Exceeds	Daily Max	Exceeds	Daily Max	Exceeds	Daily Max	
01/04/21		2.3		2.5		1.6		1.0	
01/12/21		2.0		NA		5.4		1.0	
01/29/21		3.0		0.9		3.6		2.0	
Totals/Max	0	3.0	0	2.5	0	5.4	0	2.0	
99 th Percentile		3.0		2.5		5.4		2.0	

NA - Indicates data were not available

Attainment of the SO₂ Standard:

Attainment of the new standard is achieved when the 3-year average of the 99th percentile annual distribution of the daily maxima is less than or equal to 75 ppb. Since this value can be calculated from historical data, the table below indicates those values based on 2014-2020 data.

SO₂ Annual 99th Percentiles and Annual Design Values

		Annu	al 99 th	Perce	ntiles	(ppb)		Annual Design Values				
Site Name	2015	2016	2017	2018	2019	2020	2021	2015-2017	2016-2018	2017-2019	2018-2020	2019-2021
